- A – USB3.0 connector
- B – ISO power connector

**Note on the write protection:
The write protection can only be enabled/disabled when the DriveLink Combo USB3.0 is switched off!*

4. Installing the hardware

Note:

Before you plug the DriveLink Combo USB3.0 into your PC/Laptop, connect the peripheral devices to the DriveLink Combo USB3.0.

Before using the hard disk drive for the first time, it must be properly partitioned and formatted. To format the HDD, right-click on COMPUTER and then select MANAGE.

If using Windows 7: select START, right-click COMPUTER and then select MANAGE.

After that, select DISK MANAGEMENT. Here all formatable HDDs and drives will be clearly displayed. Right-click the USB HDD and select PARTITION. The HDD will probably need to be initialized; we suggest using the NTFS data system for Windows PCs. Format the HDD to complete the procedure.

Warning:

Make sure to select the correct USB hard disk drive for formatting, due to all data saved on the HDD being lost when partitioning and formatting!

1. Connect the included power adapter to the DriveLink Combo USB3.0 and a power outlet.
2. Connect the included USB3.0 cable to the respective connector of the DriveLink Combo USB3.0 and a USB3.0 port on your PC.
3. Connect IDE and SATA devices to the DriveLink Combo USB3.0 as described below:
 - a) 2.5" IDE HDDs are directly plugged to the respective port of the DriveLink Combo USB3.0, which also powers them without any additional cabling.
 - b) 2.5" SATA HDDs are directly plugged to the respective port of the DriveLink Combo USB3.0, which also powers them without any additional cabling.

- c) 3.5" and 5.25" IDE devices connect to the respective port of the DriveLink Combo USB3.0 via the included IDE data cable. Power is provided via the included 4-pin power cable for IDE devices.

- d) 3.5" and 5.25" SATA devices:
SATA devices are directly plugged to the respective port of the DriveLink Combo USB3.0, which also powers them without any additional cabling.

4. Switch on the DriveLink Combo USB3.0. The device will be detected and installed automatically. Connected HDDs/optical devices will be displayed in the file manager.

Note:

There is no need to install additional drivers.

Before you shut down your PC, remove the DriveLink Combo USB3.0 from your system's hardware configuration by double-clicking the  symbol in the task bar. A menu will open up. Select the DriveLink Combo USB3.0 to securely remove it. Then switch off the DriveLink and shut down your PC.
